Scan to visit

Start Before you start

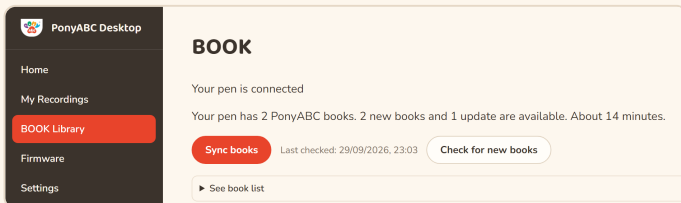

1. Install PonyABC Desktop free from the
Microsoft Store (scan the code).
2. Connect the pen with a USB data cable.
Bluetooth alone is not enough, and some
cables only charge.
3. Open the app. Home shows "P5 pen
connected". If not, click **Rescan**.

Microsoft Store

1 Put books on your pen

1. Open **BOOK Library**. One line tells you what's new and how
long it will take.
2. Click **Sync books**. There's no need to choose books.
3. Keep the pen plugged in. A large book can take about 20
minutes.

1 ...then restart the pen

All done!

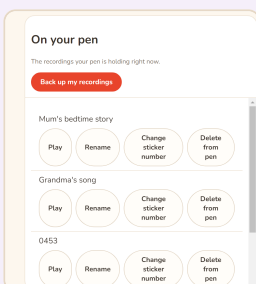

Please unplug your pen, then switch it off and on again. The first start may take a little longer while your pen gets its books ready.

4. When you see "All done!", unplug the pen and switch it off and
on. The first start takes a little longer while the pen gets its new
books ready.

Not enough space? The app checks first and tells you
how much room is needed. Back up and delete some
recordings, then sync again.

2 Keep your child's recordings

1. Open **My Recordings**, then click
Back up my recordings. A copy stays
on this computer.
2. To restore, click
Put these back on my pen. If a sticker
already has a recording, listen to both
and choose.
3. **Rename** gives a recording a name
you'll recognise.

3 Update the pen (Windows)

1. Open **Firmware** and follow the steps.
2. Say **Yes** when Windows asks for permission.
3. When it has finished, switch the pen off and on.

Please don't unplug the pen or close the app during the update.

4 Change the language

Settings → **Interface Language** (8 languages)
